

# 200kW Outdoor Photovoltaic Cabinet for Tunnels

## Overview

---

Can a contractor shut down a PV system?

The Contractor may be ordered to shut the systems down if unsafe conditions or code violations are noted. The warranty holder or a roofing contractor certified by the roof manufacturer shall inspect the PV systems to ensure the integrity of the installation.

What electrical plans are included in a PV system?

A PV system includes electrical plans such as single-line electrical diagrams showing utility interconnection and all devices comprising the PV system. These include PV arrays, combiner boxes, circuit breakers, disconnect switches, inverters, meters, timers, control devices, and other equipment comprising the complete system.

Who is responsible for keeping solar PV guidelines up-to-date?

It is the responsibility of agency managers to determine which guidelines (and which versions) apply. Agency contract officers, attorneys, and engineers are responsible for determining the final content of any solicitation. Updated to the regulations, codes, and standards applicable to solar PV are changing frequently.

What is the minimum clearance for carport PV panels?

The carport PV shall be at least 9 feet clear in all locations. Federal agencies seek a balance between aesthetics and maximizing electrical production. The PV panels on the carport shall be sloped to balance aesthetics and power production.
