

# Automatic solar energy storage cabinet terminals for airports

## Overview

---

What is a solar terminal & how does it work?

The 6.63 megawatts of solar array on the terminal's roof is part of a 12-megawatt microgrid that will distribute electric energy from solar, fuel cells and batteries through a localized and self-contained energy system that can operate independently from or connected to the main power grid.

What is a terminal one solar array?

The Terminal One solar array consists of 13,000 panels spanning the terminal roof, generating 6.63 MW of electricity. The array will work in tandem with 3.84 MW of fuel cells and a 1.5 MW (3.34 megawatt-hour) battery energy storage system, creating one of the most advanced microgrids in the country.

Can airports use solar power?

The transformation is already underway. From India to Australia, California to Germany, airports are installing vast solar arrays across terminal rooftops, parking structures, and unused land. These installations range from supplementary power sources to full-scale systems capable of meeting an airport's entire energy demand.

What are some solar projects at Port Authority facilities?

Other solar projects at Port Authority facilities include a 5-megawatt solar parking canopy at Newark Liberty International Airport, a 1.5-megawatt rooftop solar array on LaGuardia Airport's Terminal B garage, and a 600-kilowatt solar roof on a PATH warehouse rooftop.
