

Base station power cabinet installation specifications

Overview

This section provides a master list of all tools, materials, and parts required to perform the installation.

This section provides a master list of all tools, materials, and parts required to perform the installation.

To minimize shock hazard, the station equipment cabinet must be connected to an electrical ground. The equipment supplied is equipped with a three-conductor AC power cord. The power cord must be plugged into an approved three-contact electrical outlet with the grounding wire firmly connected to.

Electrician, who must control the size and loading of each branch circuit. The person or group installing Haworth products is responsible for cable building and electrical code requirements in bottom or side of raceway cover. Installable in both components in the electrical system must use the same wiring schema.

The MTS1 TETRA base station is a small, rugged and easily deployable solution for indoor and outdoor coverage applications. Based on a new high performance hardware platform, the MTS1 not only enables diverse and rapid deployments, but also ensures that operational costs are kept to an absolute minimum.

This chapter provides general instructions for anchor installation and cabinet handling. Also included are the procedures for cabinet placement, anchoring, and grounding.

Do you have spec sheets for the system?

What is the temperature range of the battery?

Why does Base request home photos?

What does photo review entail?

Where can the battery system be installed?

What are the electrical and spacing requirements for Base equipment?

What do I need to know on the day.

The Base Station is the brains of your system. It sends alarm signals to the monitoring center* with built-in cellular and Wi-Fi connections, a battery backup that lasts up to 24 hours, and a 100 dB siren. When a sensor on your system is triggered, it sends a signal to the Base Station, which.
