

Customization of smart photovoltaic energy storage cabinet for oil refineries

Overview

Can a TRNSYS solar heating system be used in a refinery?

Using TRNSYS software, the proposed Parabolic Trough Collector (PTC)-based solar heating system paired with the boiler is modelled. Sensible thermal energy storage (TES) system is integrated into the refinery's process heating to handle the intermittent nature of solar energy.

Can solar hybrid system generate steam in oil refinery?

Conclusion The present study investigates the feasibility of solar hybrid system to generate steam in the oil refinery to maintain the temperature of heavy crude oil products before despatching from storage tanks. Due to the intermittent behaviour of solar energy, the solar hybrid system is integrated with a sensible heat storage tank.

Does solar hybrid work for RFO & bitumen products?

The daily and annual heating demand for RFO and bitumen products are presented in the current study. The presented analysis of solar hybrid is based on maintaining the required temperature of refinery products before dispatch from the product storage tank. Due to the intermittent behaviour of solar energy, the solar field is integrated with TES.

Can a hybrid solar heating system be integrated with a sensible heat storage tank?

Due to the intermittent behaviour of solar energy, the solar hybrid system is integrated with a sensible heat storage tank. The suggested hybrid solar heating system for the refinery was simulated using TRNSYS software, followed by experimental validation. The main conclusions from this study are summarized as follows:
