

DC power supply cabinet for French communication power station

Overview

What is a DC power system?

DC power system that helps meet the power requirements of telecom central office and mobile switching office applications. The power system can provide up to 20,000A output capacity in integrated, multi-cabinet configurations that implement three-phase three-wire rectifiers for commercial 208/240VAC or 480VAC power.

What is a telecom power supply?

These telecom power supplies are characterised by: Compared to three-phase monoblock systems, INVERTRONIC modular inverters have a lower volume and weight. The parallel connection of the inverter modules with n+1 redundancy helps create power supply systems with the highest availability and a power range of 10 kVA - 180 kVA.

What is a preferred power supply architecture for DSL applications?

A preferred power supply architecture for DSL applications is illustrated in Fig. 2. A push-pull converter is used to convert the 48V input voltage to +/-12V and to provide electrical isolation. Synchronous buck converters powered off of the +12V rail generate various low-voltage outputs.

How many kW does a telecom power supply have?

Telecom power supplies with rectifier (72 kW right, or 90 kW left) and inverter (7.5 kVA) in one system as well as 10" touch display of the MCU 3000 system controller built into the cabinet door.
