

# How many watts does a solar flashlight have

## Overview

---

How many lumens does a solar powered flashlight produce?

Solar-powered flashlights all typically use one or more LED bulbs, but some produce much more light (measured in lumens) than others. Flashlights that can produce up to 200 lumens or more are able to light up to several hundred feet.

How do you charge a flashlight?

Solar: Since we're talking solar-powered flashlights, solar is obviously going to be a required charging method. Solar energy provides a free way to charge a flashlight, although it can be slow and is reliant on light — preferably direct sunlight. Lower-grade solar panels also slow down the charging process.

How much does a solar powered flashlight cost?

If you will be primarily using your solar-powered flashlight for camping, try to choose one in the 100 to 150 lumens range. Solar-powered flashlights range in price from under \$10 to around \$30. The average is \$15 to \$20. Inexpensive/mid-range: At a lower price point, you find simple flashlights with few bells and whistles.

How many light modes does a solar powered flashlight have?

Solar-powered flashlights may have between three and seven modes. Some common modes include three types of light intensity (low/dim, medium, and high), slow or rapid flashing lights (either in white or red) for emergencies, and side running lights for lower light situations.
