Huawei all black component project

Overview

Why is Huawei on a US trade blacklist?

In 2019, Huawei was placed on a US trade blacklist, which restricted American companies from selling technology such as software, 5G chips, and components, among other products to the Chinese company without a license. Huawei's business took a major hit as a result of continued US sanctions.

Is Huawei sourcing more components from China?

In the first six weeks of 2024, Huawei saw a surge in phone sales per unit by 64% compared to the previous year, according to research firm Counterpoint. In that same timeframe, Apple's iPhone sales in China experienced a decline of 24%. A teardown of the Pura 70 Ultra found that Huawei is sourcing more components from China amid US sanctions.

Did Huawei's Pura 70 pro have a NAND memory chip?

Online tech repair company iFixit and consultancy TechSearch International examined the inside of Huawei Technologies' Pura 70 Pro for Reuters, finding a NAND memory chip they said was likely packaged by the Chinese telecoms equipment maker's in-house chip unit HiSilicon and several other components made by Chinese suppliers.

What chipset does the Huawei Pura 70 use?

The firms also found that the Pura 70 phones run on an advanced processing chipset made by Huawei called the Kirin 9010 that is likely only a slightly improved version of the Chinese-made advanced chip used by Huawei's Mate 60 series.
