An implementation agreement is in place between Serbia's Ministry of Mining and Energy, utility company Elektroprivreda Srbije (EPS) and a consortium of Hyundai Engineering and UGT Renewables for six new solar plants totalling 1 GW. Up to 200 MW of battery storage will be developed across the.

The Serbian Government and EPS have signed an agreement with a consortium of Hyundai Engineering and UGT Renewables to construct large-scale solar power plants equipped with battery storage systems. Construction is scheduled to begin in 2025, with completion expected by 2028, followed by a two-year.

The Government of Serbia issued a decision to develop a special purpose spatial plan for a group of solar power plants of a total of 1 GW in connection capacity including battery energy storage systems of at least 200 MW in operating power. Hyundai Engineering and UGT Renewables were selected as.

Located throughout the country, these solar power plants will help Serbia improve energy security, avoid expensive energy imports, and achieve electricity independence at an affordable price. The modernization of the EPS and renewing Serbia's Energy Generation Portfolio will have a lasting impact.

Representatives of Hyundai Engineering and UGT Renewables, the companies developing a solar power project in Serbia of 1.2 GW in total, and with batteries, said the strategic partnership is a step toward expansion in the surrounding region. Spatial planning is nearly complete. Following the signing.

The Serbian Government has approved the development of a spatial plan for

constructing large-capacity self-balancing solar power plants paired with battery energy storage systems. This ambitious initiative will encompass areas in the cities of Zajecar and Leskovac, as well as the municipalities of.
