Lima wastewater treatment plant uses outdoor telecom cabinet hybrid type

Overview

FlexSure 3030 BLS solution architecture allows the rapid creation and growth of virtually any outdoor cabinet configuration by leveraging pre-engineered common interchangeable components.

FlexSure 3030 BLS solution architecture allows the rapid creation and growth of virtually any outdoor cabinet configuration by leveraging pre-engineered common interchangeable components.

The City of Lima Wastewater Plant treats an annual average of just over 13 million gallons of sewage a day and can treat a peak flow of 70 million gallons per day. The treatment plant receives a combination of domestic and industrial sewage as well as storm water. Approximately 60% of the city's.

For all of those reasons, today's efficient wastewater treatment plants are basing their communications network infrastructures on ultra-reliable, high-speed fiber optic cabling coupled with connection and control devices that are designed to withstand the harsh environments within those plants.

Purcell Systems' solutions specifically address operators and service providers' needs for durable equipment enclosures, modular cabinets, advanced surge protection technology, optimal battery backup enclosures, superior power management, and complete climate control cabinets, for equipment.

For all of those reasons, today's efficient wastewater treatment plants are basing their communications network infrastructures on ultra-reliable, high-speed fiber optic cabling coupled with connection and control devices that are designed to withstand the harsh environments within those plants.

For all of those reasons, today's efficient wastewater treatment plants are basing their communications network infrastructures on ultra-reliable, high-speed fiber optic cabling coupled with connection and control devices that are designed to withstand the harsh environments within those plants.

Whether it be storm sewer runoff or drainage from home or business use, once water leaves the drain, it enters a complex network of underground pipes. And once processed at a wastewater facility, that water typically completes its journey

by emptying into a lake or river. Efficient water/wastewater.
