

# Madrid solar storage cabinet hybrid

## Overview

---

Can a hybrid energy storage system reduce energy costs?

Scientists have developed a hybrid energy storage system combining lithium-ion batteries with power-to-heat-to-power thermal batteries (PHPS), cutting energy costs by 7 percent and boosting solar self-consumption by up to 20 percent.

Does a hybrid solar system reduce energy consumption?

"Under the assumptions of this study, the hybrid solution reduces the levelized cost of consumed energy by 7 percent compared to a system relying solely on Li-ion batteries, while simultaneously increasing PV self-consumption by up to 20 percent," they claimed.

What are the benefits of a hybrid solar system?

Meanwhile, the hybrid configuration delivered a substantial boost in PV self-consumption which is the amount of solar energy used directly by the building rather than exported to the grid. The PV self-consumption rate reached 68.3 percent in the hybrid system with a heat pump and 68.1 percent in the lithium-only version with a heat pump.
