

Outdoor solar power hub alice

Overview

How much electricity can a solar farm produce in Alice Springs?

The solar farm will produce about 1% of Alice Springs' electricity a year and can meet 2% of peak demand on a sunny day. Following the success of Uterne I, Ark Energy developed and commissioned the larger 3.1 Megawatt Uterne II project on adjacent land, bringing the total capacity of the site to 4.1 Megawatts.

How do energy hubs work?

By managing energy locally, hubs help alleviate grid congestion and reduce transmission losses, making the energy system more robust and responsive to local demands. Managing energy hubs comes with its own set of challenges, particularly when integrating renewable energy sources and managing grid congestion.

How many solar panels are there in Alice?

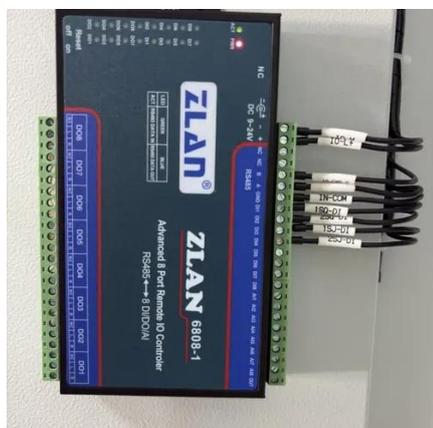

Built by Sunpower Australia with funding as part of the Alice Solar City initiative, the installation covers more than three hectares and consists of 3,048 ultra-efficient mono-crystalline panels installed across 254 tracking arrays.

How do I manage an energy hub effectively?

Managing an energy hub effectively involves a systematic approach using the Tibo smart grid EMS, which ensures optimal performance and sustainability. This guide will take you through the essential steps involved in managing an energy hub using Tibo EMS, from data collection to continuous adaptation.
