Why do businesses install energy storage?

Energy storage is a great option for commercial properties looking to cut energy costs and improve reliability. With storage prices decreasing in recent years, state and federal incentives to install storage, and increasingly complex—and pricey!—electricity.

Energy storage, simply put, means capturing and storing energy for later use. Businesses can use an energy storage system to store excess energy produced by a renewable energy system, or to buy electricity off the grid and store it when demand is low and prices are low. Then the business can use it.
