Viet Nam has large potential on wind power generation with consuming no fuel and no GHG emission. Wind power is being an alternative to fossil fuels in power generation, without GHG emissions during operation. The legal framework (policies and support mechanisms) for wind power development is still.

Consuming more energy per unit of economic output than the Philippines, Malaysia, Indonesia and India, Vietnam is one of the world's most energy-intensive economies.³ It is expected that Vietnam's electricity demand will continue to increase at an average rate of up to 9% annually over the next.
