

# Solar system price per unit

## Overview

---

Typical residential rates average about \$2.53 per watt before incentives. A 12 kW system averages roughly \$29,649 before credits, and full installed ranges often sit between \$25,000 and \$45,000. Larger orders usually lower the unit rate. Regional demand shapes offers.

Get solar power system costs based on your location, roof, power usage, and current local offers. Published: January 2026 Solar panels cost about \$21,816 on average when purchased with cash or \$26,004 when purchased with a loan for a 7.2 kW system. While that price tag seems steep, the electricity.

IRENA presents solar photovoltaic module prices for a number of different technologies. Here we use the average yearly price for technologies 'Thin film a-Si/u-Si or Global Price Index (from Q4 2013)'. This data is expressed in US dollars per watt, adjusted for inflation. IRENA (2025); Nemet.

Each year, the U.S. Department of Energy (DOE) Solar Energy Technologies Office (SETO) and its national laboratory partners analyze cost data for U.S. solar photovoltaic (PV) systems to develop cost benchmarks. These benchmarks help measure progress toward goals for reducing solar electricity costs.

Switch to solar with a system built for you. Solar panels can lower your electricity bill by 75% or more, but the upfront investment is significant. Most homeowners spend between \$12,600 and \$33,376 to install a complete residential solar system in 2025, with the national average at \$19,873 before.

As of 2026, the average cost of residential solar panels in the U.S. is between

\$15,000 and \$25,000 before incentives. This typically translates to about \$2.50 to \$3.50 per watt of installed capacity (more on price per watt below). The total price depends on your system size, location, roof type.
