

Waterproof energy storage cabinet after-sales service procurement contract

Overview

Should ISC agreement structure be adopted for initial procurement of utility-scale energy storage resources?

The ISC agreement structure be adopted for the initial procurement of utility-scale energy storage resources. Given the successful implementation of CfD in Illinois RPS and their ability to provide a balanced approach to risk allocation, as well as the condensed timeline to conclude the initial procurement.

How do energy storage contracts work?

For standalone energy storage contracts, these are typically structured with a fixed monthly capacity payment plus some variable cost per megawatt hour (MWh) of throughput. For a combined renewables-plus-storage project, it may be structured with an energy-only price in lieu of a fixed monthly capacity payment.

Should the initial procurement use an ISC agreement structure?

Yes. The initial procurement should use an ISC agreement structure, rather than a tolling agreement structure. An ISC agreement structure which is a contract for difference, is currently used in utility-scale renewable energy credit procurements conducted by the Illinois Power Agency (IPA) to implement the Renewable Portfolio Standard (RPS).

What is the energy storage system agreement (ISC)?

Energy storage systems, bridging the gap between wholesale market revenues and the project's revenue requirements. The ISC agreement incentivizes developers to build and operate energy storage systems consistent with the existing market framework and mechanisms of the wholesale market of PJM and MISO. The focus of the ISC is to
