

Which generator cabinet set is the best to use

Overview

What type of generator do I Need?

For domestic use, up to 18 kW, you will need a single-phase generator set, except possibly for some very energy-intensive equipment such as heat pumps. For professional use, you will probably need a three-phase generator set to supply machines that require more power. Some three-phase generator sets are equipped with single-phase outlets.

How do I choose a generator set?

Other key factors when choosing a generator set are the type of fuel (diesel, hybrid, gasoline or gas), the need for mobility (fixed or portable), the level of soundproofing, the possibility of integration with control systems (BMS or SCADA), and compliance with specific regulations such as ISO 8528-1 or ATEX requirements in hazardous environments.

What is a generator set?

A generator set is a device used to produce electricity. It is made up of an electric generator and an engine mounted together. Generator sets can be used as the main or auxiliary source to meet energy needs, reliably and efficiently, for any type of application. How to choose a generator set?

.

How safe is a generator set?

The generator set must be able to provide the peak power consumed by all the equipment that needs to start at the same time. For resistive equipment (lighting, television, small electrical appliances, etc.), a safety factor of 30% must be added when determining the power of the generator set.
