

Which generator cabinet set to choose

Overview

What type of generator do I Need?

For domestic use, up to 18 kW, you will need a single-phase generator set, except possibly for some very energy-intensive equipment such as heat pumps. For professional use, you will probably need a three-phase generator set to supply machines that require more power. Some three-phase generator sets are equipped with single-phase outlets.

How to choose a generator set?

It will also be necessary to define the motor type, for example a gasoline engine if you are looking for a small compact generator set, a diesel engine if you are looking for a large generator set or a gas or turbine engine if this energy source is available and you want a more economical and less polluting set.

What is a generator set?

A generator set is a device used to produce electricity. It is made up of an electric generator and an engine mounted together. Generator sets can be used as the main or auxiliary source to meet energy needs, reliably and efficiently, for any type of application. How to choose a generator set?

.

How safe is a generator set?

The generator set must be able to provide the peak power consumed by all the equipment that needs to start at the same time. For resistive equipment (lighting, television, small electrical appliances, etc.), a safety factor of 30% must be added when determining the power of the generator set.
